

Pre-loaded and pre-configured ... plug in and be productive.

aSa[®] IT Services

aSa's certified information technology staff delivers top-notch turn-key systems specially designed to run your aSa software and keep you working at maximum productivity.

- **Enjoy turn-key solutions**

Dealing with incompatible computer hardware and software can be very frustrating - let aSa do it for you! We thoroughly test all new components for quality and compatibility. Just plug it in!

- **Eliminate downtime**

aSa has partnered with Dell to save you money and provide three-year next-day warranties on every computer we supply. Plus, aSa's setup services will save you valuable time when your hardware arrives.

- **Secure your organization**

Viruses, hackers, and spyware are constant threats to your computer systems. With the help of aSa's IT staff, you can virtually eliminate these concerns.

Computer systems are an essential part of your business and must run reliably for you to be productive. Whether you operate on a stand-alone laptop or on a wide-area network with hundreds of computers and printers, aSa's IT department can help ensure that your system runs smoothly. Like our software products, aSa stands behind its IT Services, 100%. Our professional staff excels in designing, supporting, and maintaining all facets of information technology.

The Measure of Experience

aSa is a Microsoft Certified Partner. This ensures that your technology needs are being handled by trained, tested experts. Additionally, aSa encourages continuing education for all consultants. While classroom training and certifications are important, nothing can replace hands-on experience. That is why aSa hires IT consultants with years of experience; they currently average over six years in the IT industry. Experienced personnel lead to faster service and improved customer productivity.

Partners in Hardware

For over four years, aSa has provided computing solutions from Dell. The pricing, quality, and warranty of Dell products is simply the best in the business. Every server, laptop, and PC purchased from aSa comes with a three-year next-day on-site warranty. We strive to provide complete computer solutions, and our relationship with Dell allows us to do this better than ever before.

While aSa works exclusively with Dell to provide the best desktop and laptop computers, we work with many manufacturers to provide the best printing, monitor, and network solutions available. With extensive resources dedicated to research, development, and testing, we continuously research for the best products available to meet the unique needs of the rebar industry.

- **Experience aSa IT Services**

The information science industry moves so quickly, that personnel need to adjust rapidly. aSa's staff is highly educated and experienced to serve your needs.

- **Rely on our proven staff**

IT consultants average over six years experience in the IT industry, and half of the IT staff has been with aSa for five years or more. The same consultants who have been helping you for years will be there for you tomorrow.

- **Stay on the cutting edge**

aSa is dedicated to finding the best technology for your industry. aSa's extensive research and testing allows us to offer thermal printing, bar coding, and computing solutions that help your operation to run more efficiently.

- **See the support staff at work**

Using web technology, we can control your computer remotely (and securely) from our office. This allows us to demonstrate proper use of software and easily troubleshoot system issues.

Find Out What Makes aSa the Rebar Industry's Premier IT Services Provider

Information Technology moves at a dizzying pace. Our customers are in the rebar business, not the IT business; why not let aSa stay ahead of the curve for you? aSa's IT staff combines education, experience, and product knowledge to provide you with the most complete set of IT services available.

- **Rebar Industry Experience** — Many companies offer IT Services, but how many are familiar with your business? aSa provides IT services with you in mind because we have been in the rebar industry for more than 36 years.
- **aSa Rebar Software Knowledge** — No one knows your software better than the people who create it. Our IT staff is instrumental in testing and developing our software, so they know it inside and out. You rely on aSa software to run your business; rely on aSa IT Services for the technology to run your software.
- **Customer and Employee Retention** — aSa places a premium on keeping customers satisfied and keeping great employees. We have nine employees who have been with aSa for 20 or more years, and half of our IT staff has been with aSa for at least five years. This ensures that the people who help you today will be there for you tomorrow.
