

Mesh & Concrete Accessories

MANAGING ALL THE PRODUCTS YOU SUPPLY

aSa handles *all* the products you supply. Mesh, couplers, bar supports, and any other product you provide to your customers can be managed in the system.

Flexible setup. Define each product you supply. Set up units of measure, lap percentage, and other product-specific characteristics.

Easy takeoff. Add products to your estimates, CAD drawings, and bar lists. The program automatically converts units of measure for your convenience. For example, you can enter mesh in square meters or square feet, and the program will calculate the required sheets or rolls based on the area and lapping percentage that you specify.

Special tools for fabricated mesh. If you cut and bend mesh sheets, aSa helps you mark up the item's price based on the extra shop labor required. When you bend mesh into a specific shape, a picture of the shape is included on your production tags.

Advanced reporting. The mesh and other products are totalled on your reports. Tags and reports display scanned or CAD-generated pictures of each product for easy identification in the office, plant, and jobsite.
